Assignment 1

**Describing Design process**

Generally, Most of design techniques are from lecture note

Memorizing coordinate was quit hard at the beginning but now I’m used to do it now so that can work it faster than before

The most commands that I used is for loop, if else statement, line, rectangle, triangle, stroke for color selection,

With these commands, a lot of sketch can be shown

Using random method with else if statement were easy to use at same time.

If the variable value is 100, it can be divided like 1 to 20 for one event and 21 to 41 for another event.
