Lab Exercises

Comments
Write comments in Processing to describe a program you would like to create

Creating a display window
Write a program to create a 640 x 480 pixel window with a black background
Use the `size()` and `background()` functions to create your display window

Writing to the console
Use `println()` to write text to the console area in Processing

Drawing 1
Create a sketch to draw a picture by composing multiple shapes on the screen
Try using the different functions for drawing ellipses, triangles, and rectangles

Drawing 2
Modify the code for exercise 1 to change the fill, stroke and background values

Drawing 3
Create a visual knot using only Bezier curves

You may find it useful to use these grids to plan your drawings
